

SMS-Alarm 4G

Internet connected 2G/4G alarm transmitter

GSM dialer for alarm transfer

SMS-Alarm 4G is our new generation 2G/4G alarm transmitter that can be programmed entirely via the Internet. Via a web page, all settings are made such as managing receivers, configuring inputs, etc.

The outputs can be used either as alarm outputs or as general outputs that can be switched on/off from the web page. There is also an output for sum alarms

The device sends SMS in the event of an alarm.

With the event log, you get a clear history with the date and time of previous alarms.

Easy-to-understand status page with the possibility to name inputs and outputs for a better overview.

- 4 inputs
- 4 outputs
- 1 output for sum alarm
