SIGNAL PROCESSING UNITS

UNICONT PMM-300

The UNICONT PMM-300 is a universal one or two channel process controller with relay and analog outputs and a PID algorithm that supports a wide range of functions. It can be used for standard to extraordinary temperature control tasks (cooling, heating). In addition to the usual inputs, practically all common temperature sensors can be connected. Thanks to the auto-tuning function, the controller can be successfully operated by technicians not used to process control. The 4-digit displays can be read from a distance. The UNICONT PMM-300 is highly accurate and easy to use, making it suitable for use as a panel instrument in both laboratory and industrial process control applications.

UNICONT PMG-500

The UNICONT PMG-500 series universal controllers are 1/16 DIN (48 × 48 mm [1.9 × 1.9"]) process controllers with relay and analog outputs or a PID algorithm supporting versatile functions. The universal analog PID controllers can be used with popular RTD (Pt , JPt , Cu) resistance thermometers and various thermocouples for temperature measurement, control and processing of signals from transmitters with 0...20 mA, 4...20 mA and 0...10 V DC, 0...5 V DC, 1...5 V DC, 0...100 mV DC output. The controller's output signal can be a relay, a continuous 4...20 mA process current signal, or an SSR driver. An additional alarm relay is provided for limit monitoring. The unit is microprocessor based, has auto-tuning software and its PID controller can find the optimum PID constants. The PMG-500 Series is capable of RS485 communication and has an input to receive the output signal from a current transformer (CT). The large two-color display is easy to read even from a distance.
